Dear Ed:

As promised, I enclose a layout of the 8 X 24 foot shelter for the diffusion transfer system. Also attached is a list of steps involved.

This makes a much better layout than the 8 X 20 shelter. Even if we use an 8 X 12 reefer, which we are now considering, there is plenty of room for one of each in any long distance cargo plane. The second reefer would then be used to leapfrog or replace the first whenever resupply was indicated.

E. L. G.
